

I would like to express a great concern for a system that I have become dependant on since it has been installed. XM radio has been a benefit to me due to my job taking me on the road in the state of Alabama and surrounding states. The weather and traffic is great. Depending on local radio is horrible. Trying to find a station on FM for upto date news and weather is impossible. I find myself in a non XM vehicle changing stations every 50 miles looking for the news and infoI need. XM needs to be able to keep this service since it is a paid for service (xmradio). Local stations carry ads for weather and traffic which in my opinion is a waste of my valuable time.
